

Matheus Vinicios de Castilho

Dublin, Ireland • matheusvcastilho@gmail.com
github.com/CastilhoMatheus • linkedin.com/in/matheuscastilho/

PROFILE

Final-year BSc Computing and Information Technology student at CCT College Dublin (graduating May 2027), with professional experience modernising a legacy PHP ERP system during a software development internship. Ships full-stack TypeScript applications with Next.js, React and Postgres, deployed on Vercel and AWS. Also holds a supervisory role at McDonald's, running shifts and leading a crew team. Seeking a 2027 graduate software engineering role in Dublin.

EDUCATION

CCT College Dublin Dublin, Ireland
BSc (Hons) in Computing and Information Technology Sep 2023 – May 2027

- On track for Second Class Honours, Grade 1 (2.1) — Stage 3 credit-weighted average 62%

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, PHP, SQL
Frontend: React, Next.js (App Router), React Native (Expo), HTML/CSS, Tailwind CSS
Backend & APIs: Node.js, Express, REST API design, Prisma, authentication (AWS Cognito, Clerk)
Cloud & Data: AWS (Lambda, API Gateway, Cognito, RDS), Vercel, PostgreSQL, MySQL, Redis
Tools & Practices: Git & GitHub, Linux, OOP and design patterns, UML, Agile, unit testing

EXPERIENCE

Software Development Intern — Makersoft Remote
June – August 2024

- Migrated core ERP modules from Zend Framework to Laminas, replacing end-of-life dependencies and bringing legacy code onto a supported, maintainable framework.
- Rebuilt responsive UI features across customer and employee portals for desktop and mobile, working to existing design patterns and verifying behaviour across breakpoints.
- Worked in an established PHP codebase alongside the engineering team, using Git branching and code review.

Shift Runner — McDonald's Dublin, Ireland
April 2023 – Present

- Run shifts as the manager on duty, directing a team across kitchen and front counter through peak trading periods.
- Accountable for service-time targets, stock levels, food safety compliance and cash handling during the shift.
- Train and support new crew members, and resolve customer issues escalated during service.

PROJECTS

AI-Powered Quiz Platform Next.js · Anthropic API · Postgres
github.com/CastilhoMatheus/AI-quiz-maker

- Full-stack application that generates quizzes from a user-supplied topic using Claude via the Anthropic SDK, returning structured JSON that is validated before it is persisted.
- Designed a normalised Postgres schema (quiz / quiz_attempt) with Prisma, supporting attempt history and per-question scoring.
- Added a Redis caching layer to avoid repeated model calls, reducing API cost and response latency on repeat topics.
- Tech:** Next.js 14 (App Router), TypeScript, Tailwind CSS, Prisma, Neon Postgres, Vercel KV (Redis), Anthropic API.

Ateliê Paslauski — Art Studio Website Next.js · Prisma · Cloudinary

- Built a Next.js application with a Postgres-backed catalogue of works, modelled with Prisma and administered through a protected dashboard.
- Integrated Cloudinary for image upload, transformation and delivery, keeping page weight low on image-heavy galleries.
- Resolved build-time data-fetching issues with generateStaticParams to get reliable static generation on Vercel.
- Tech:** Next.js (App Router), TypeScript, Prisma, PostgreSQL, Cloudinary, Vercel.

AI-Powered Journal Analyzer

Next.js · OpenAI API · Postgres

ai-fullstack-journal.vercel.app • github.com/CastilhoMatheus/ai-fullstack-journal

- Journalling platform where entries are analysed by an LLM to produce summaries and sentiment classification, surfaced back to the user in the entry view.
- Modelled entries and analysis results in PostgreSQL via Prisma; all model calls handled server-side so API keys are never exposed to the client.
- **Tech:** React, Next.js, Prisma, PostgreSQL, OpenAI API.

Also built: Bible Tracker — reading-plan app in React Native (Expo) with NativeWind, deployed live • Customer Management System — CRUD app on AWS Lambda, API Gateway, Cognito and RDS/MySQL • Task Management App — JavaScript OOP prototype (dependency injection, interfaces) later rebuilt on AWS • School Library Management System — OOP design with UML and a data-access layer.

ADDITIONAL

Interests: Football, running and strength training. Daily algorithm practice logged publicly at github.com/CastilhoMatheus/neetcode-submissions (recursion, linked lists, binary trees).
